ALCAPA Naissance anormale de l'artère coronaire gauche à partir de l'artère pulmonaire Dr Régis GAUDIN

Techniques chirurgicales

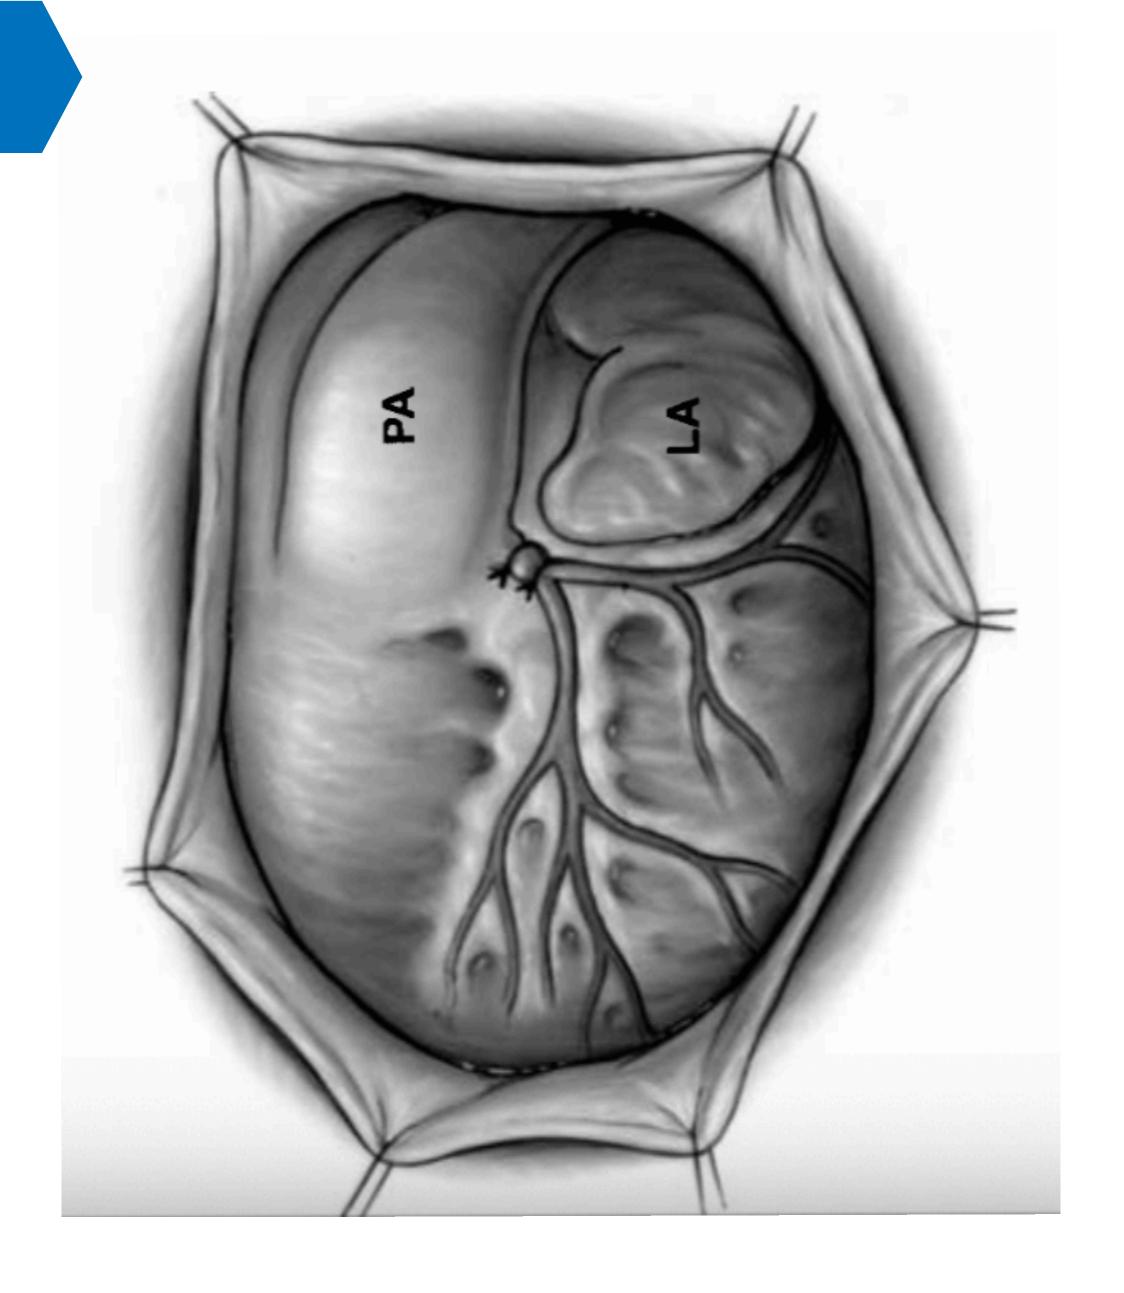

ligature coronaire gauche

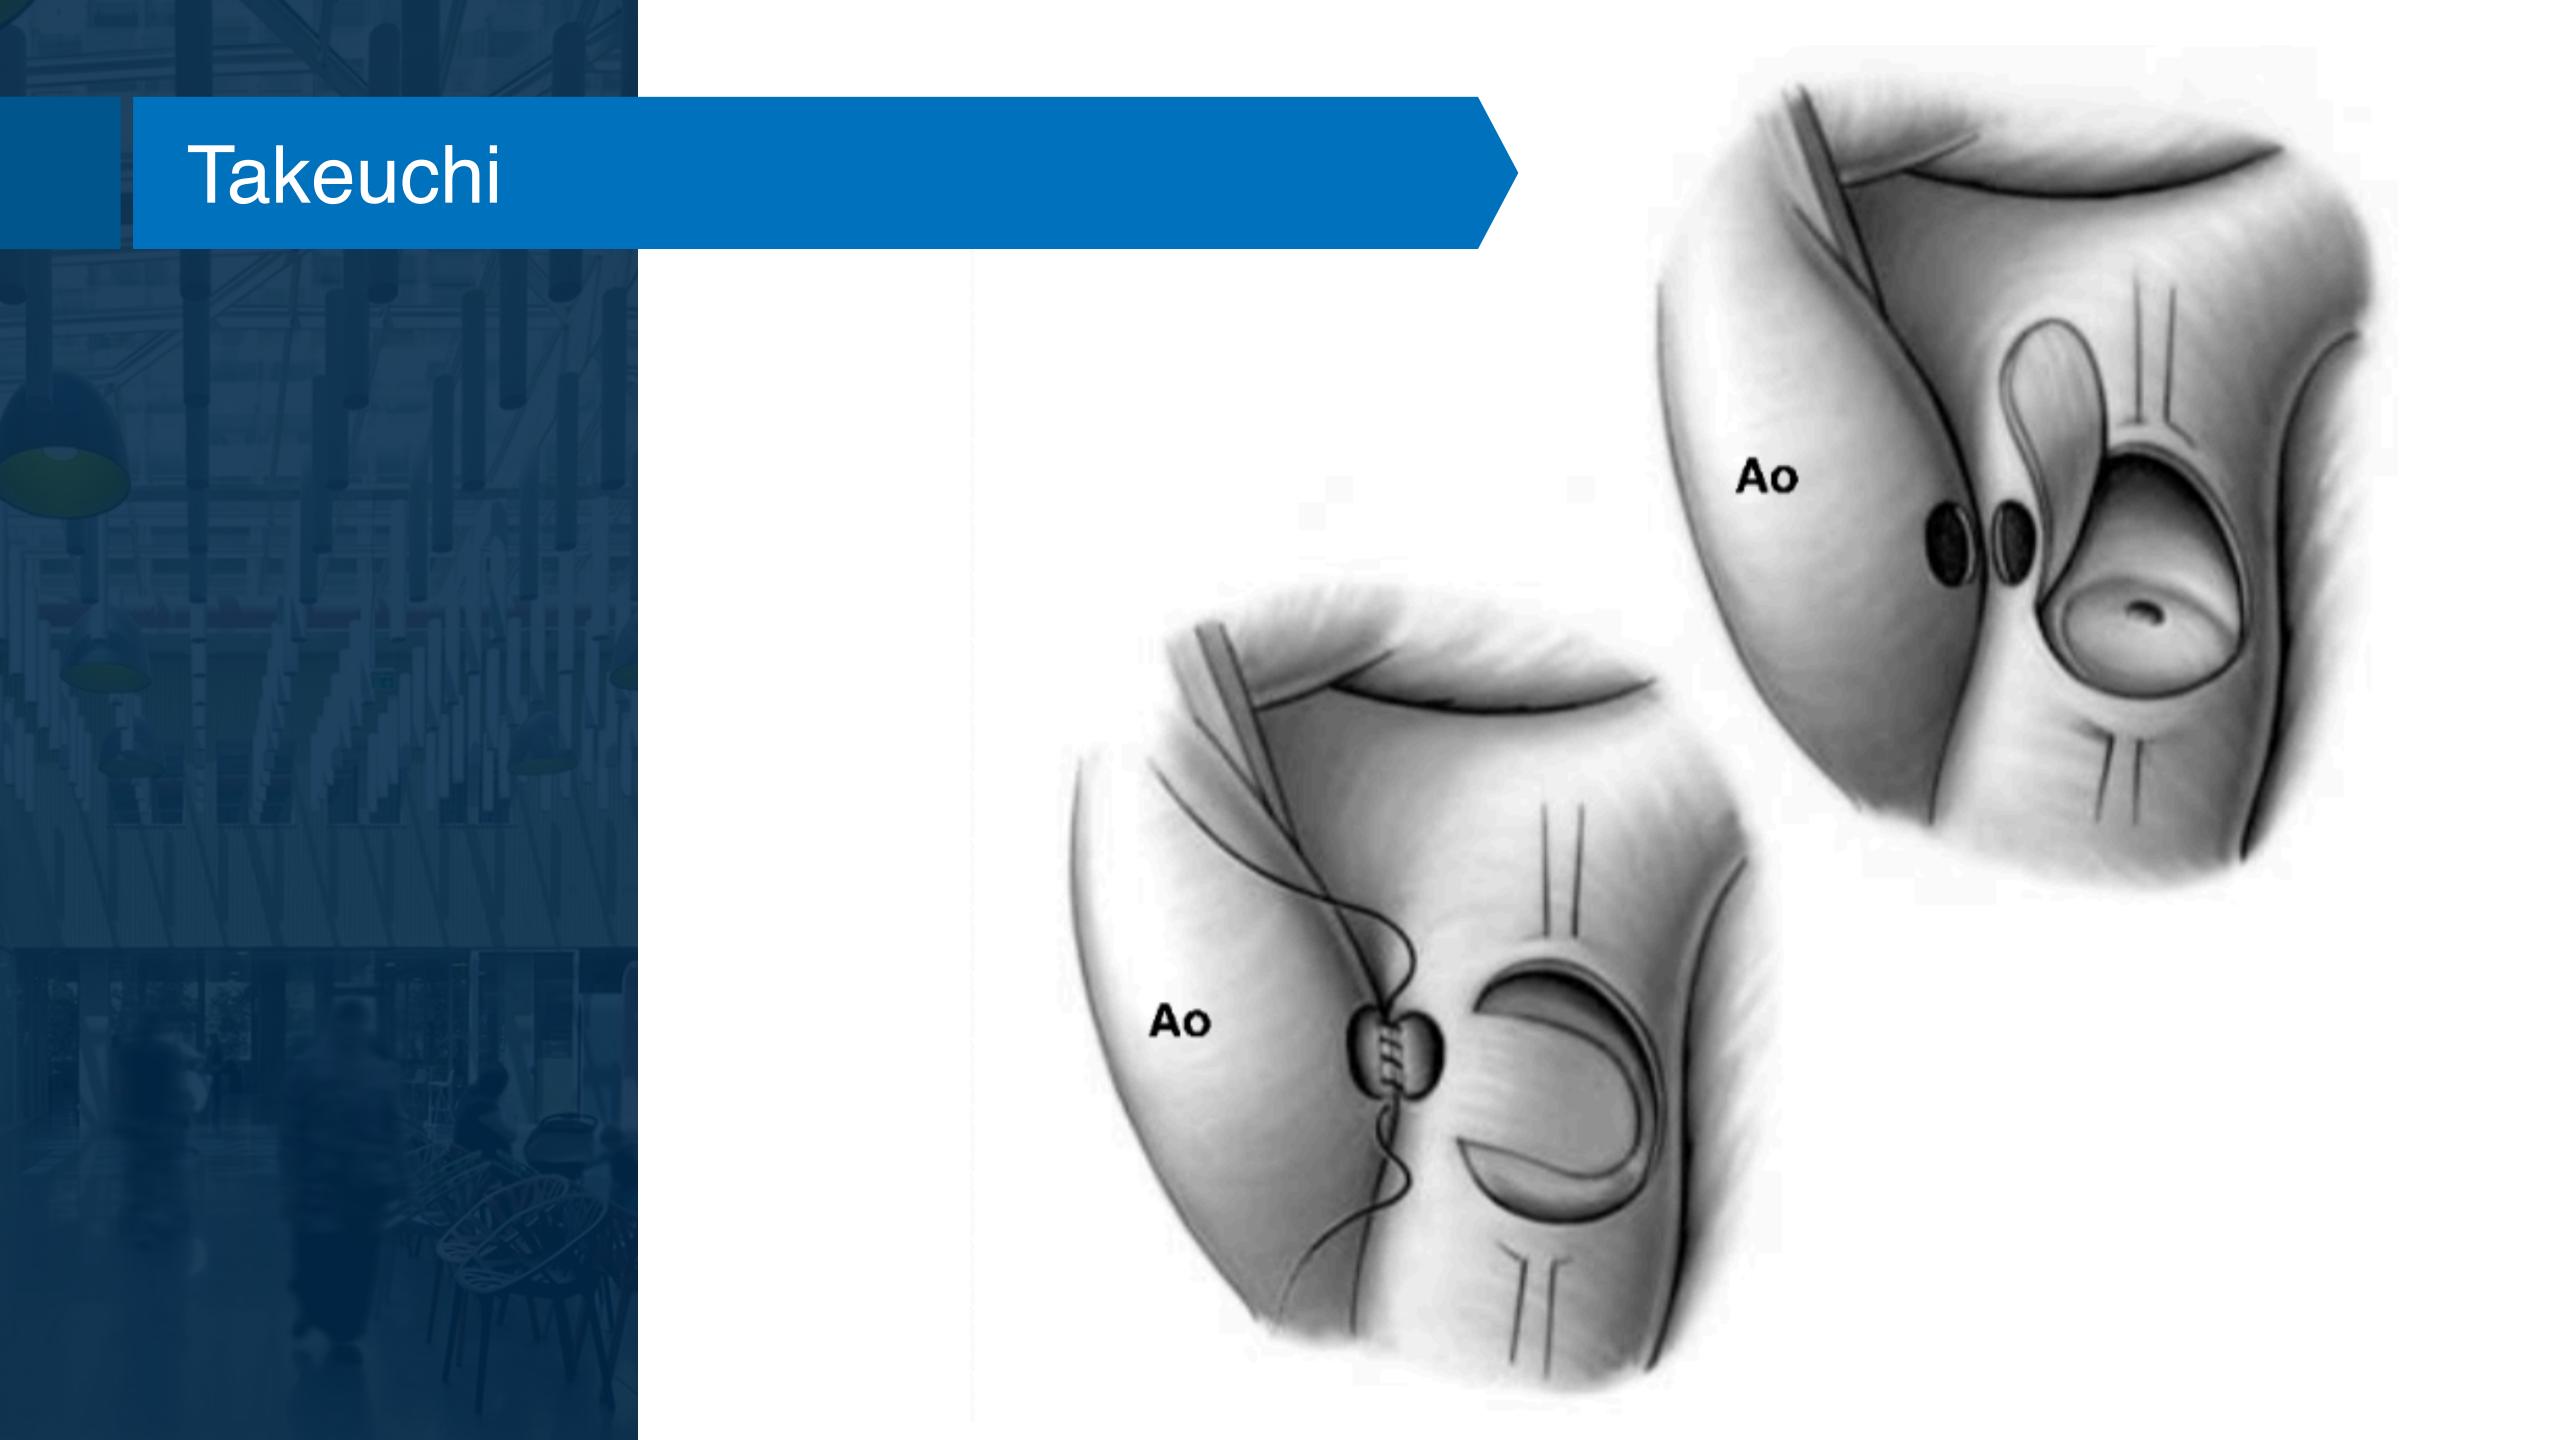

intervention de Takeuchi (tunnel intrapulmonaire)

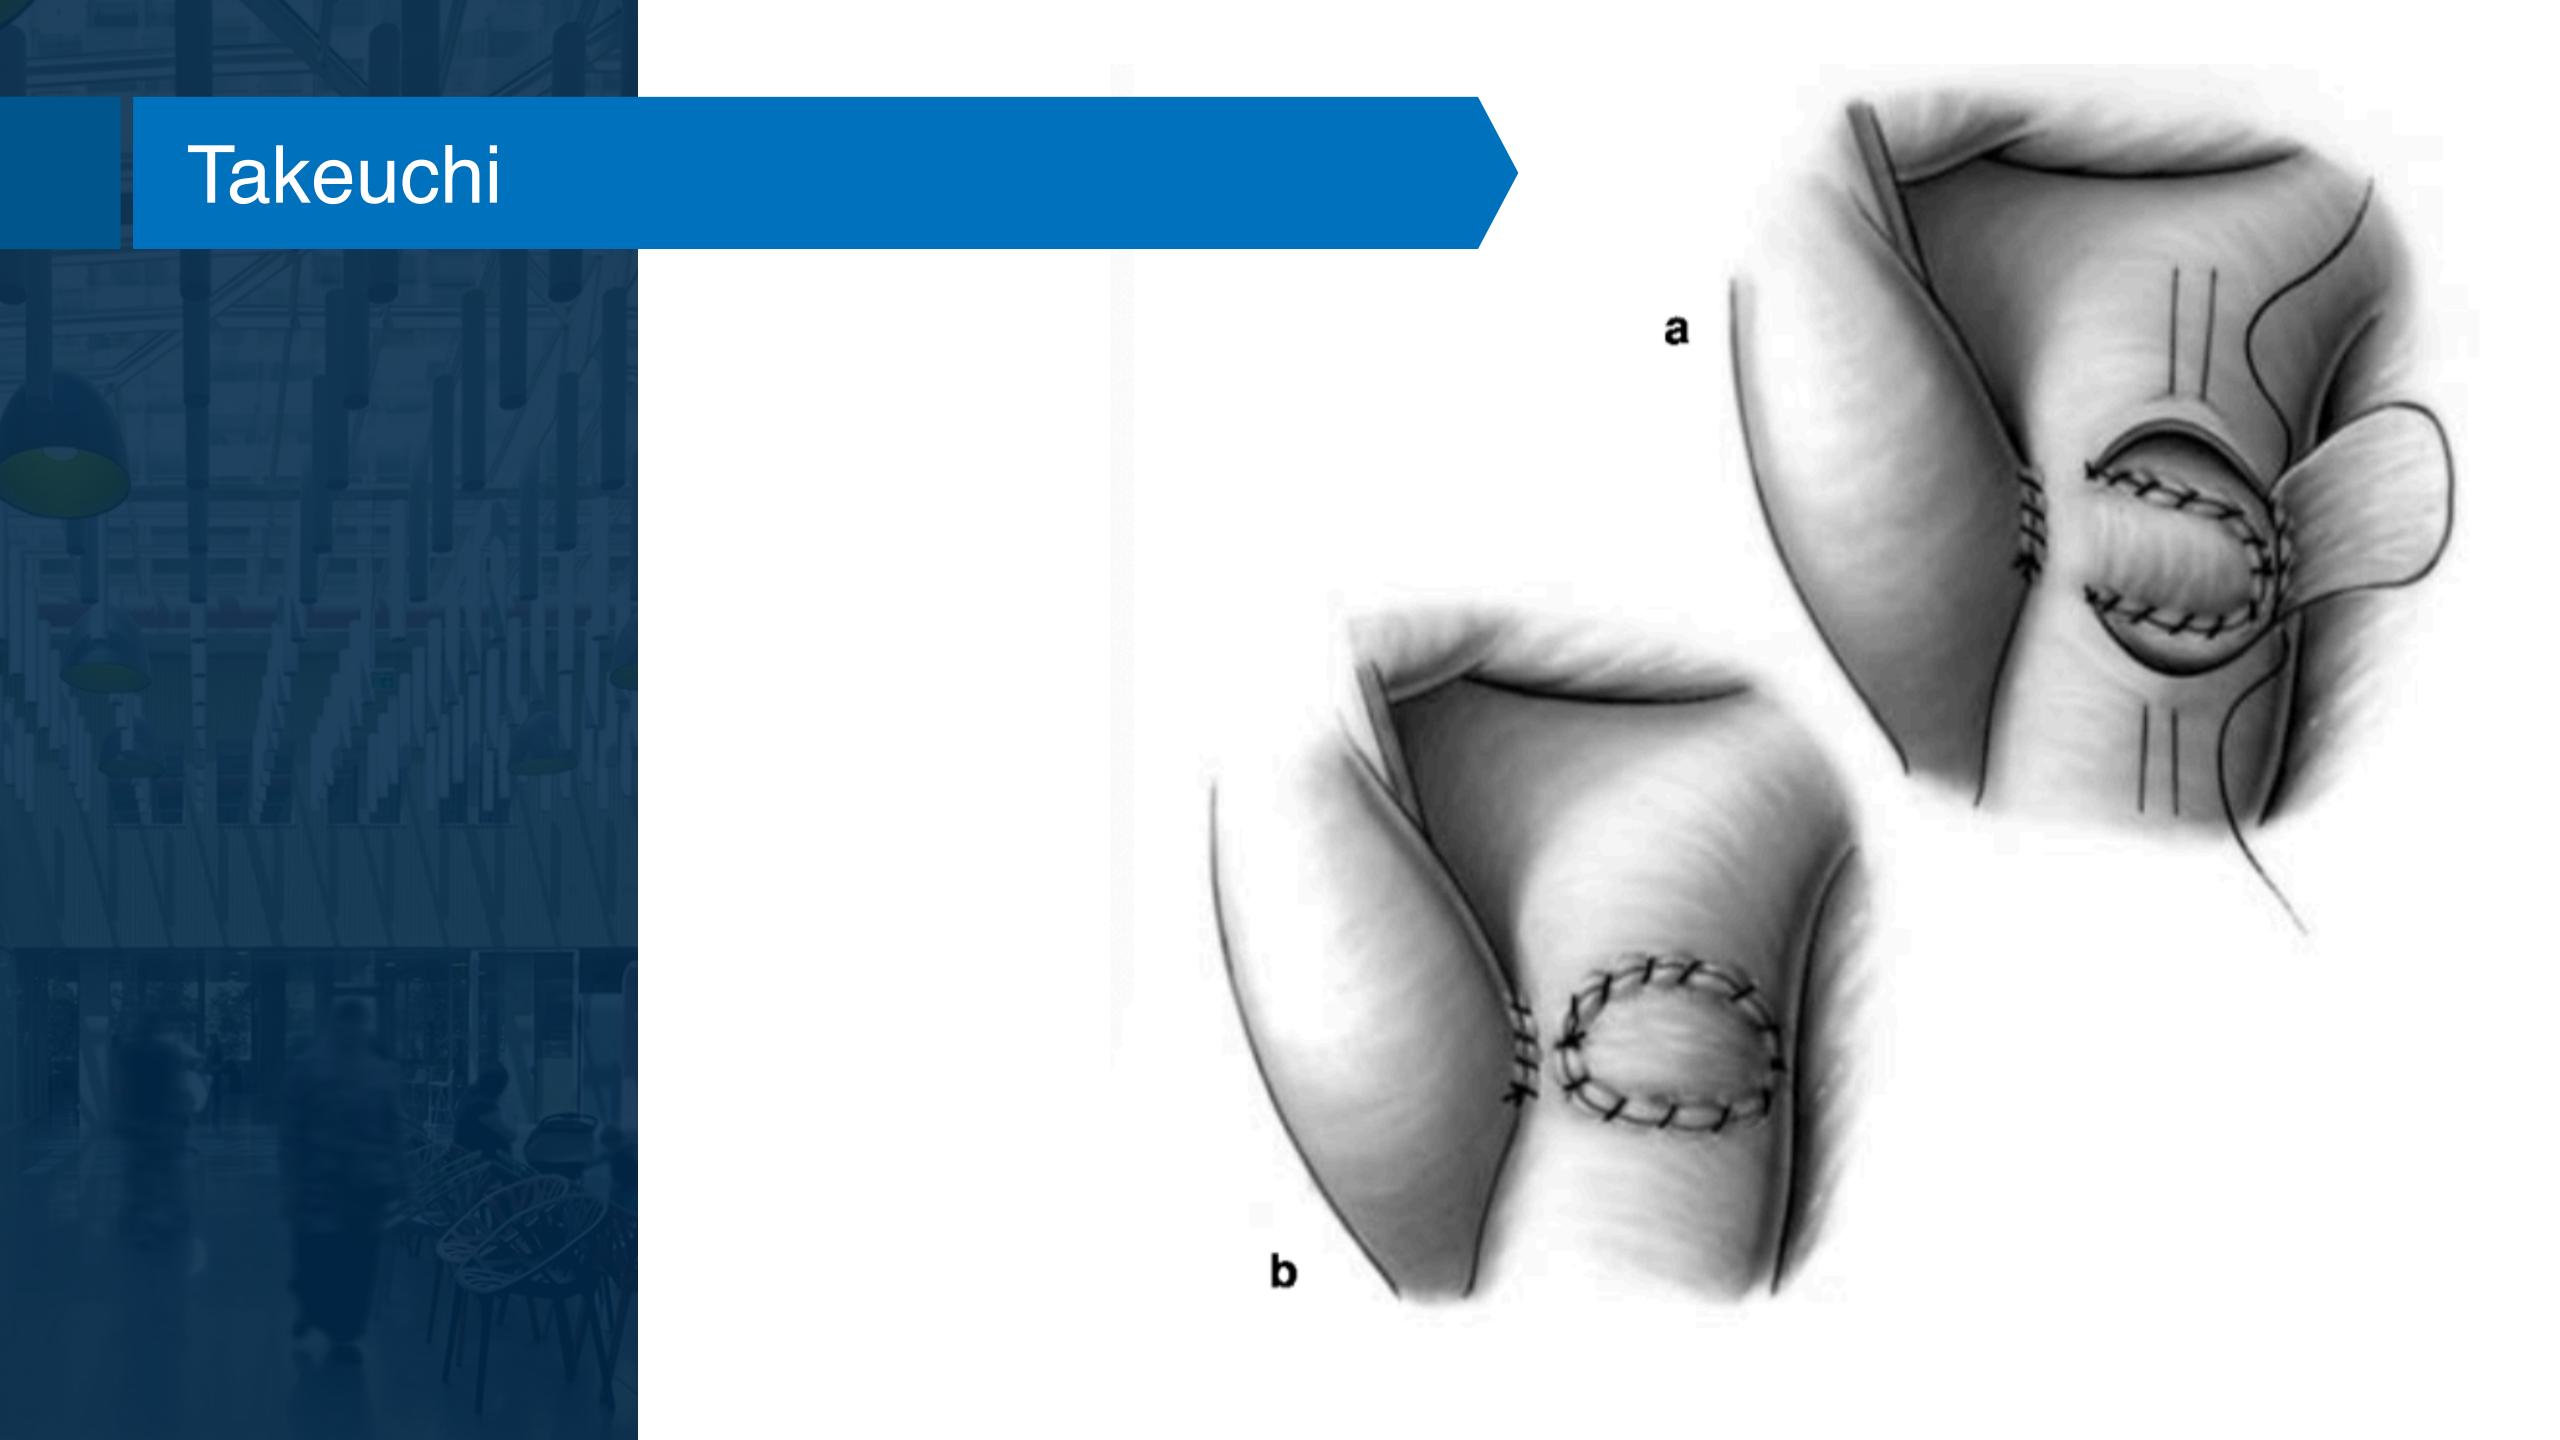

réimplantation aortique

Ligature

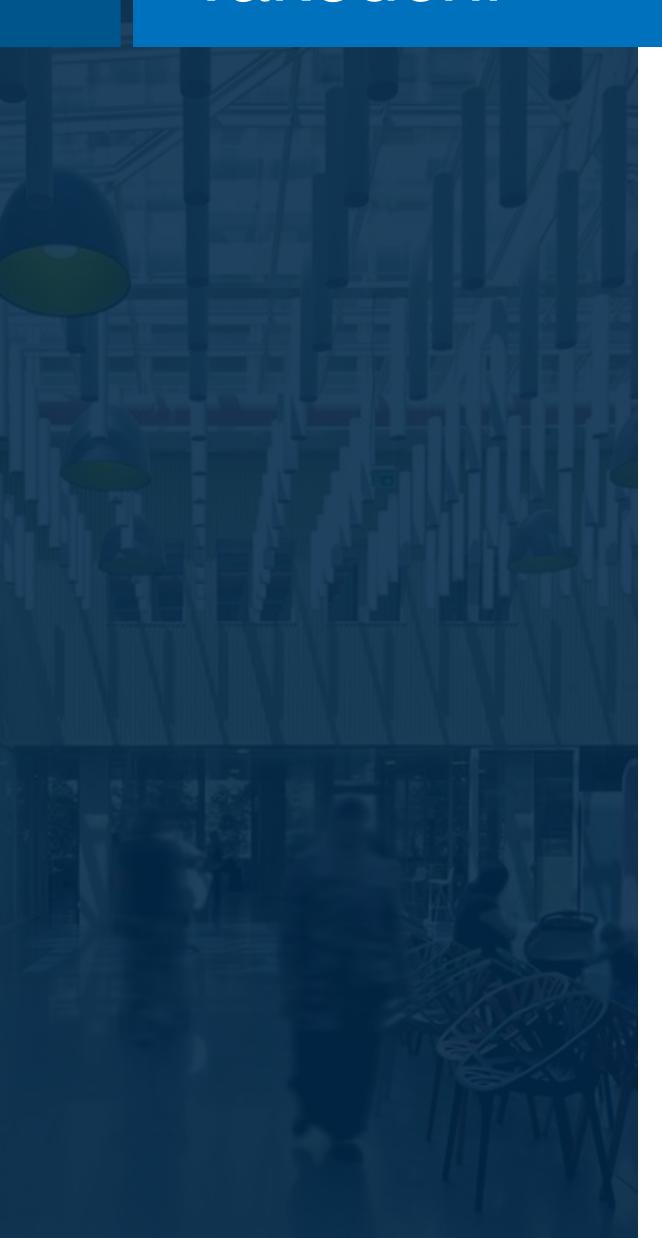

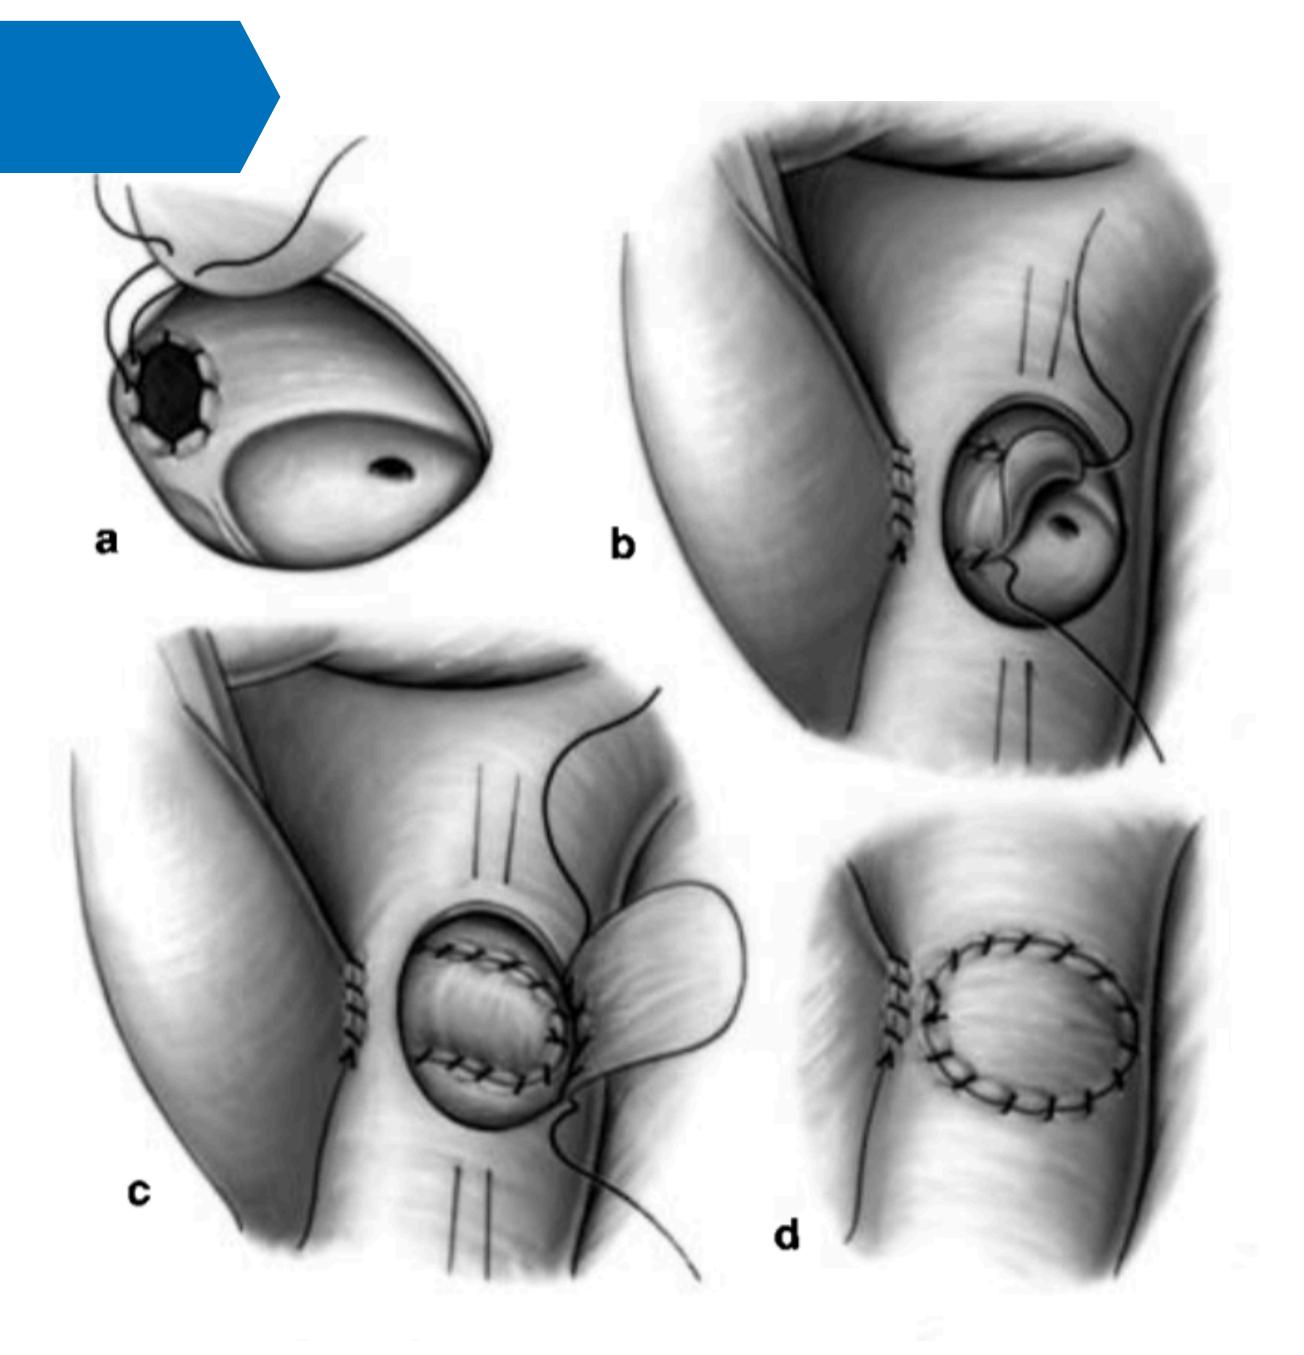

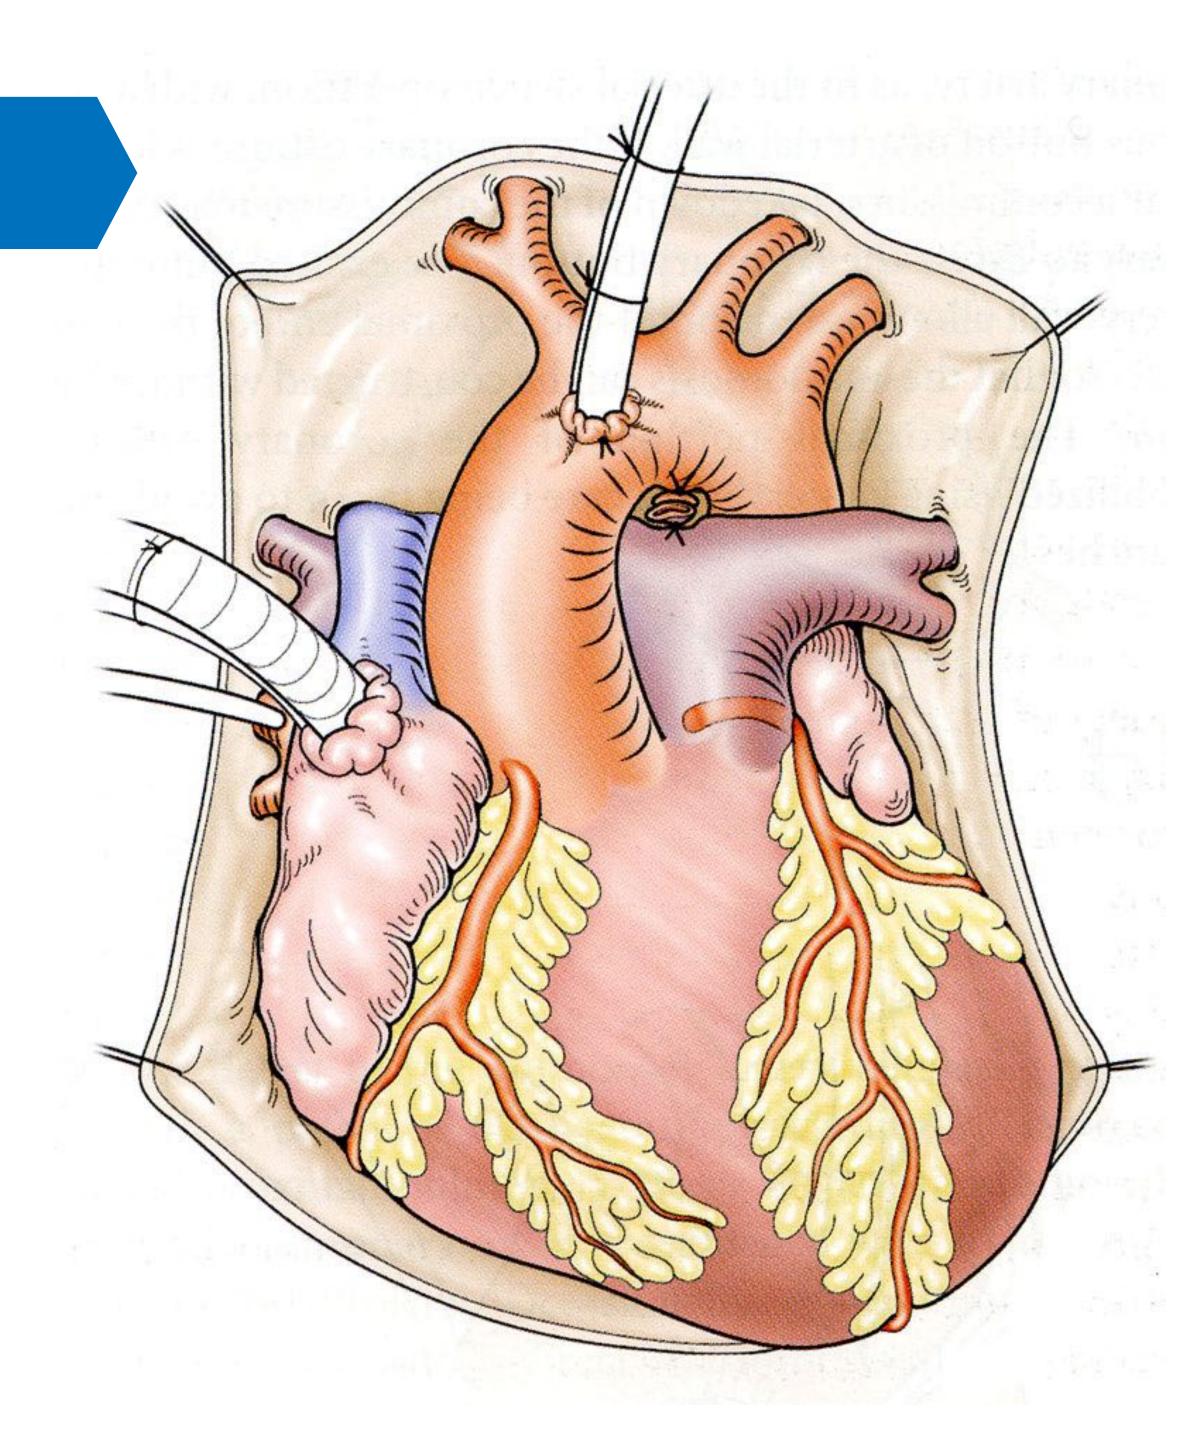

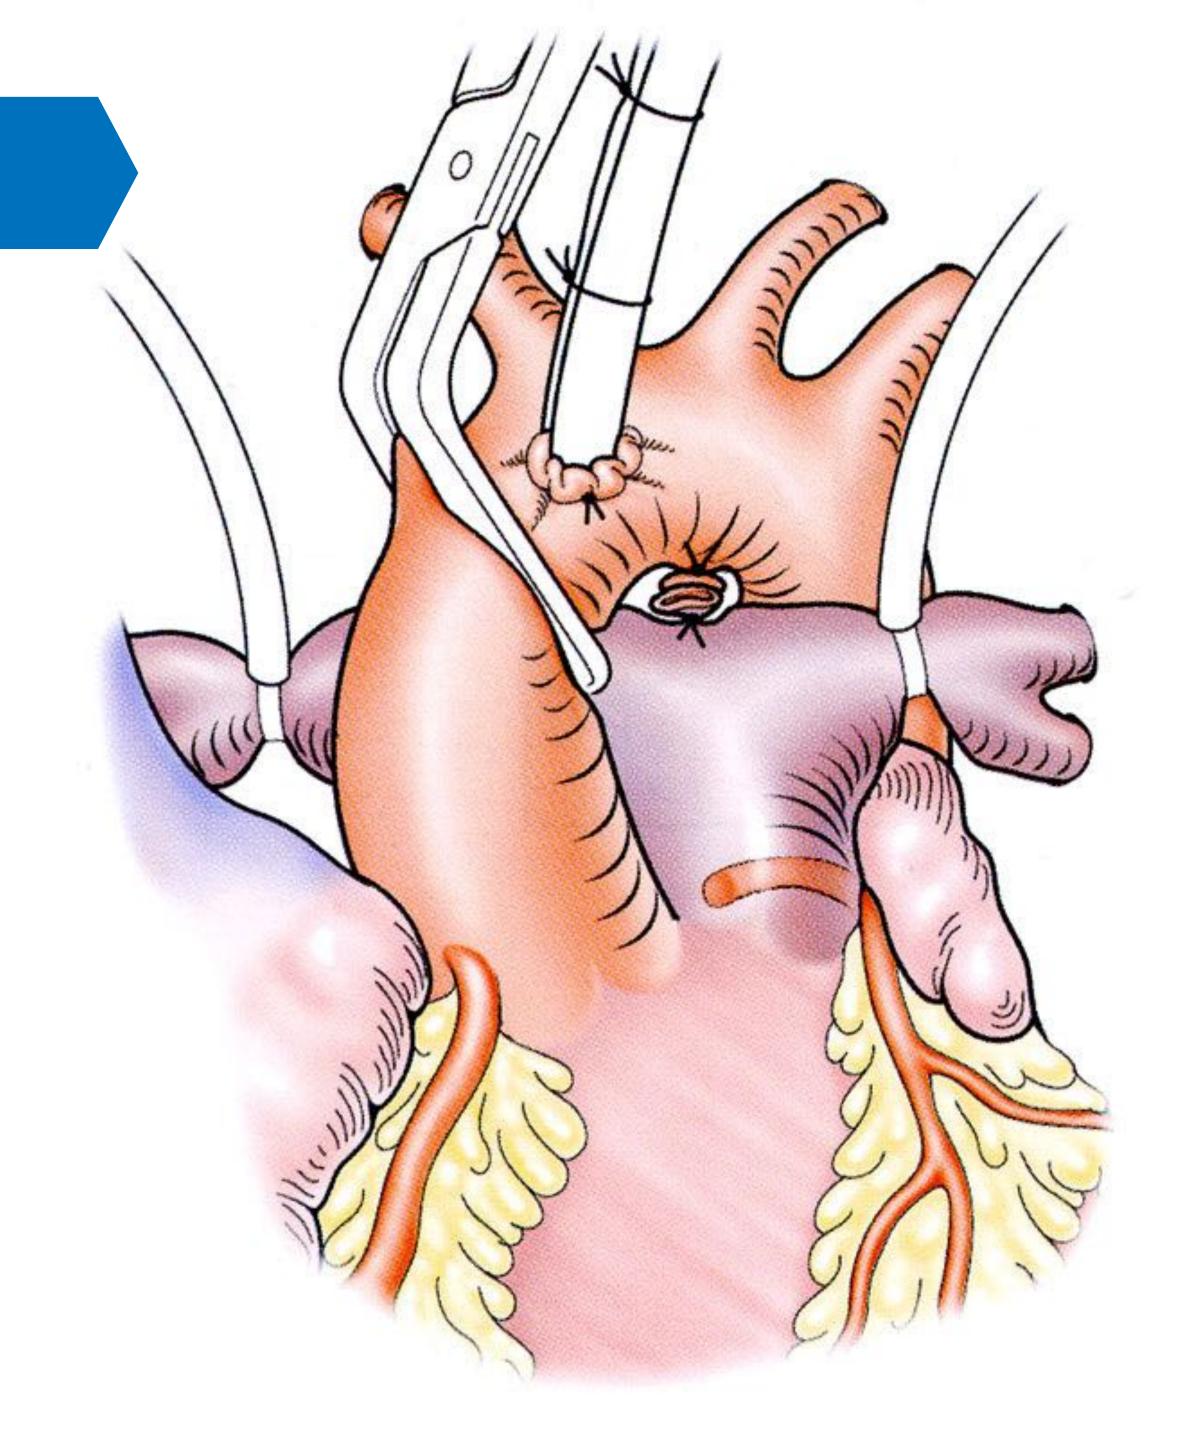

Takeuchi

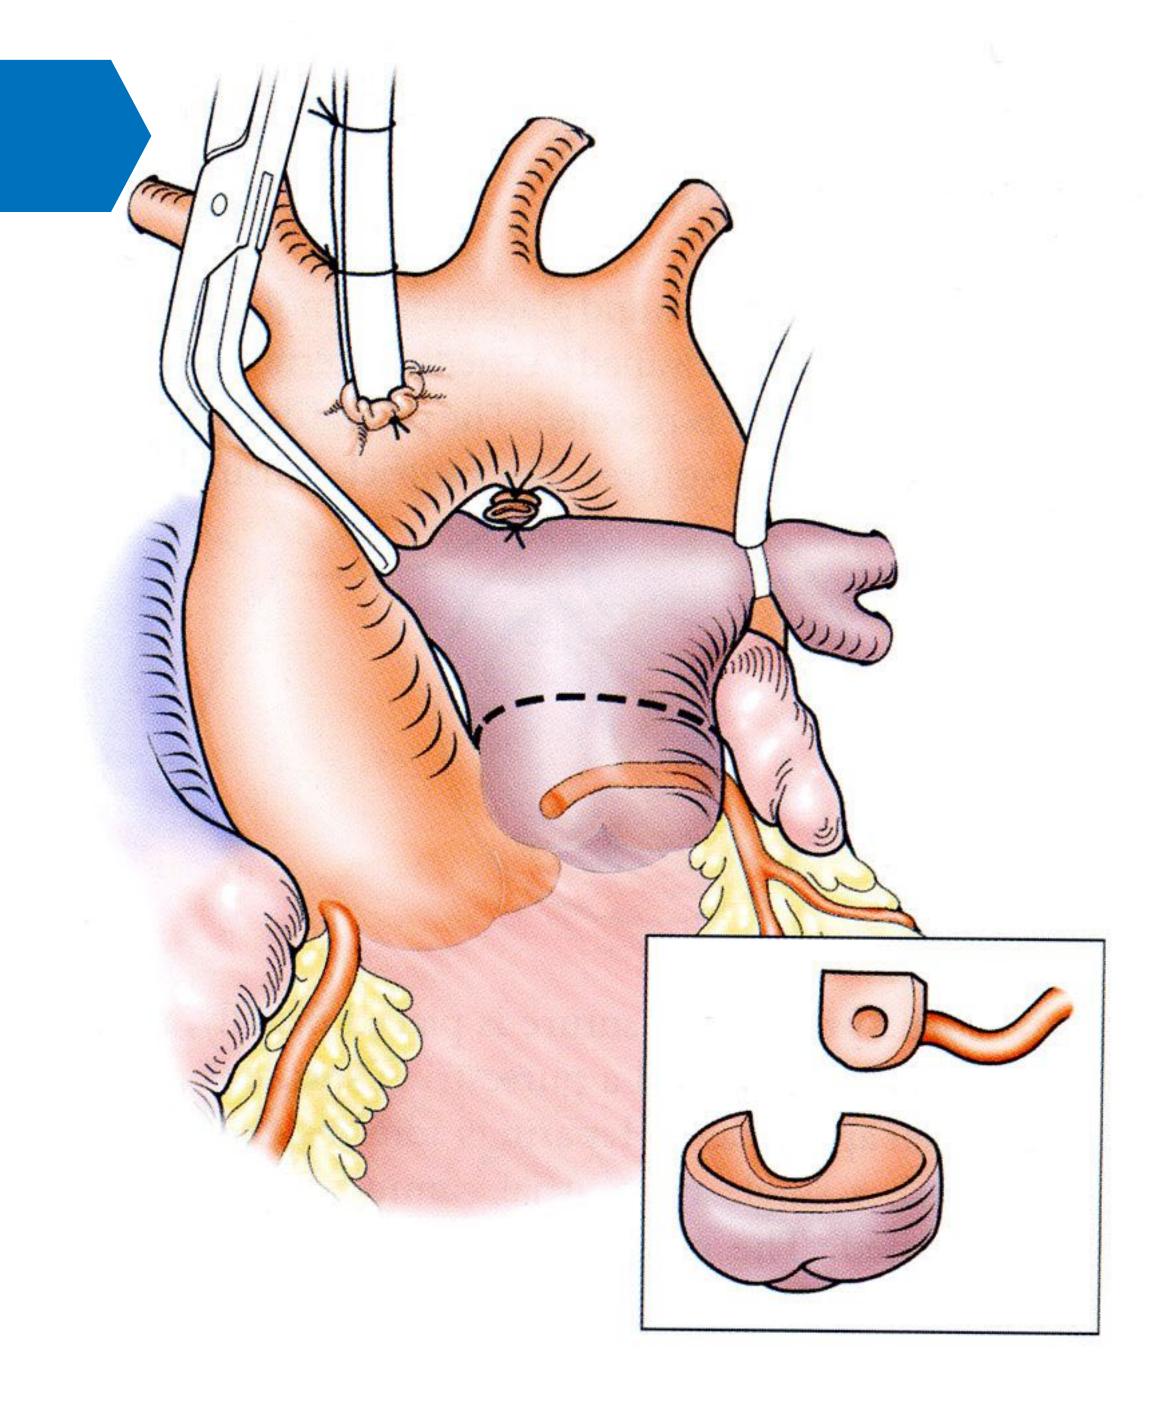

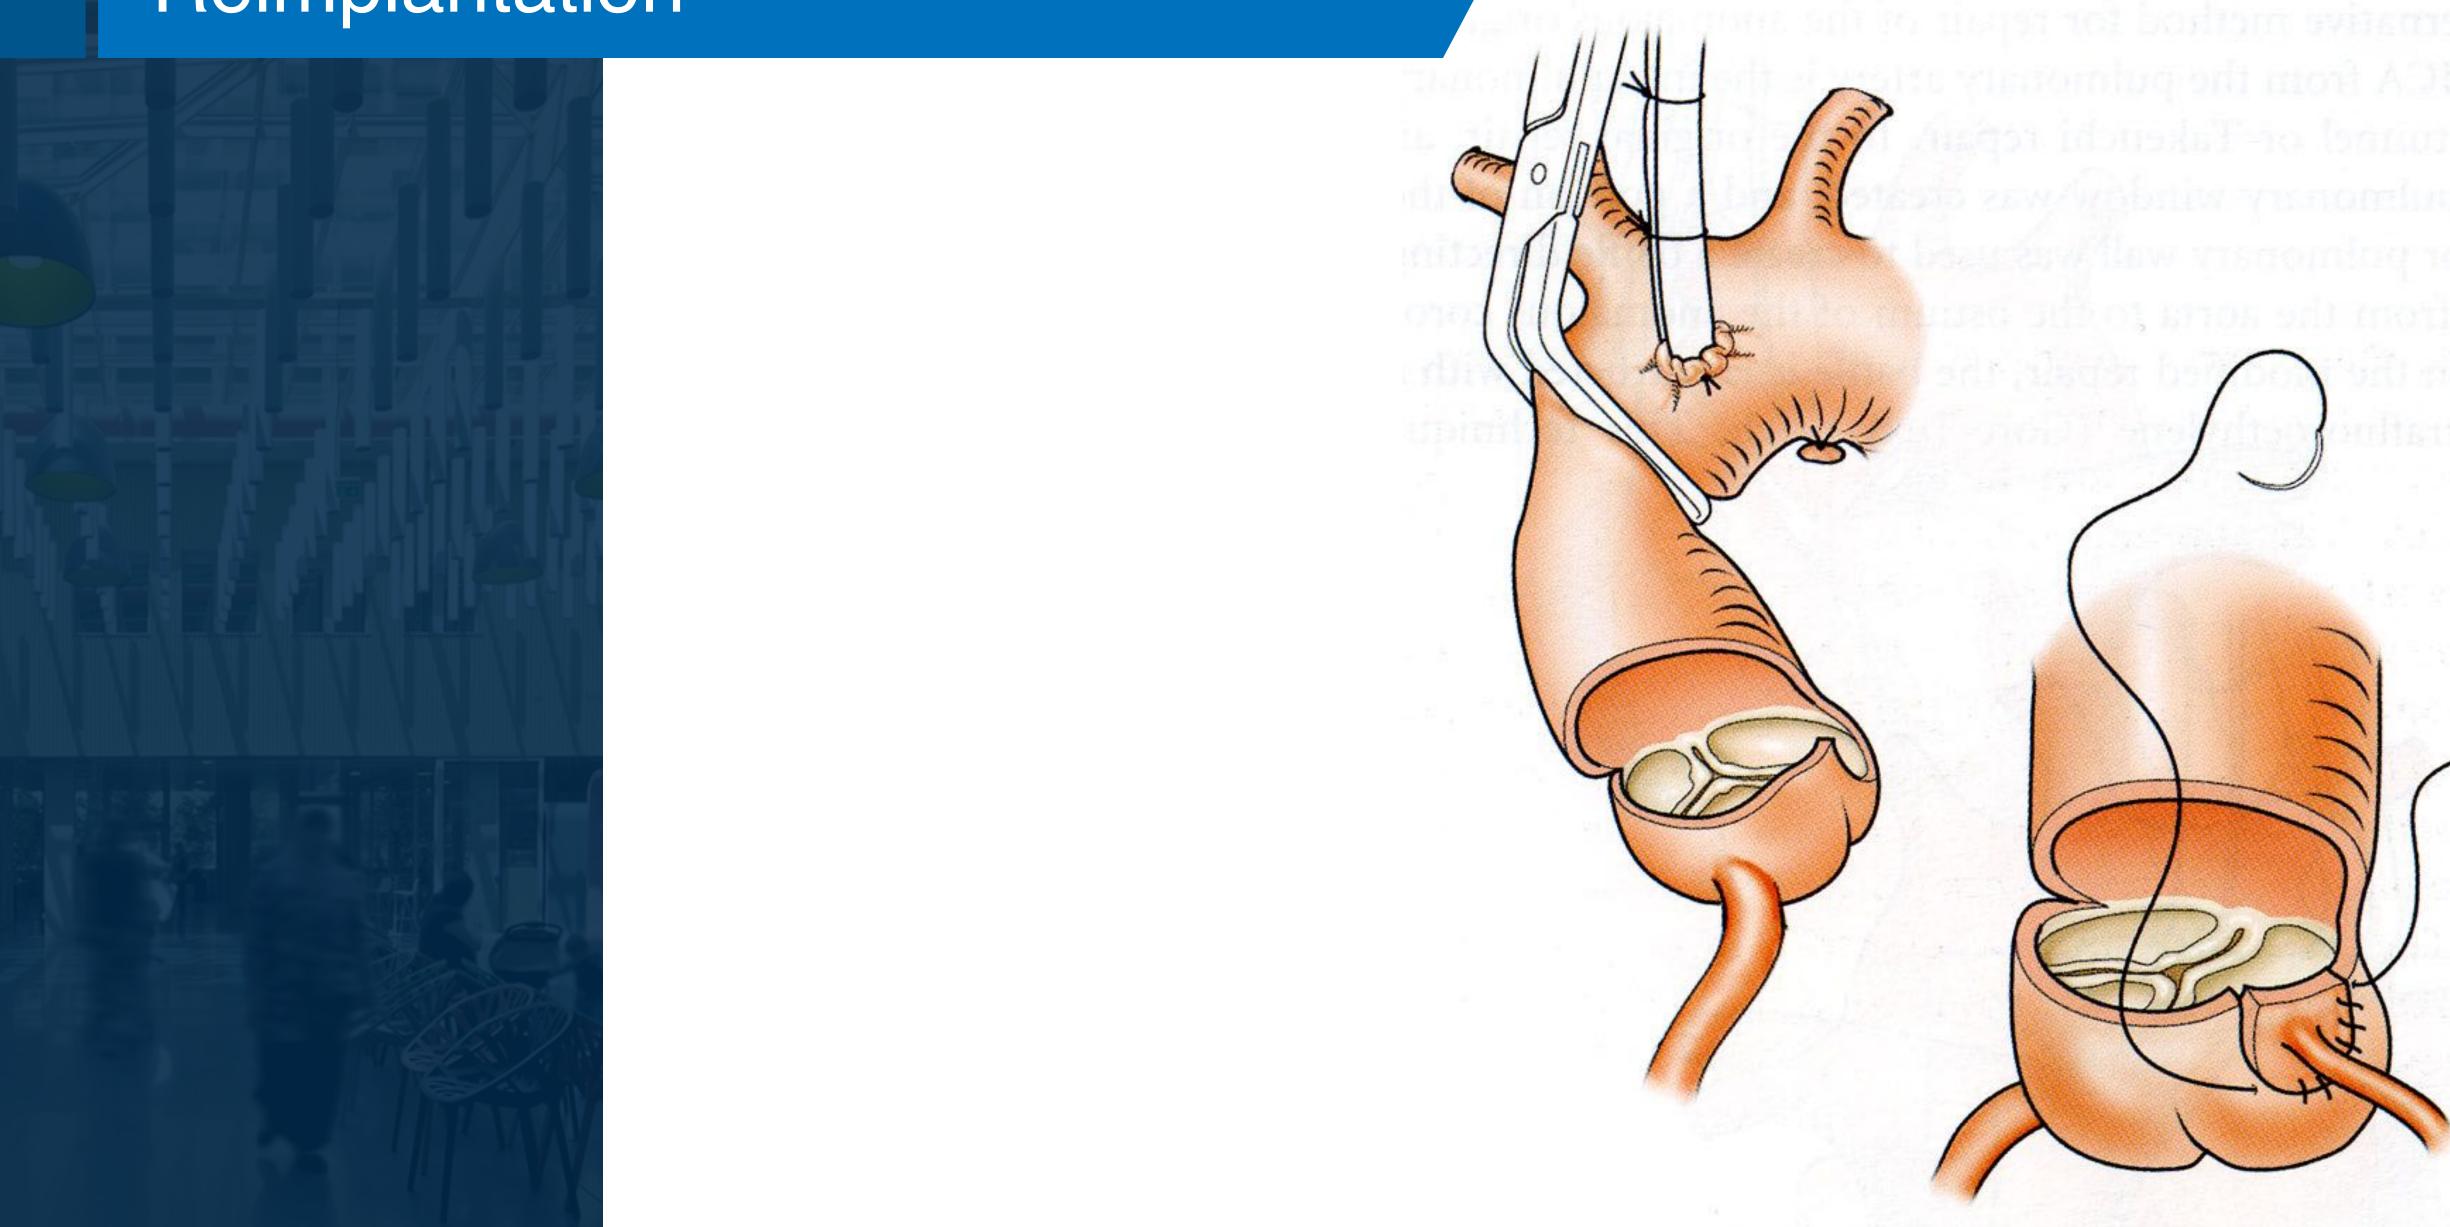

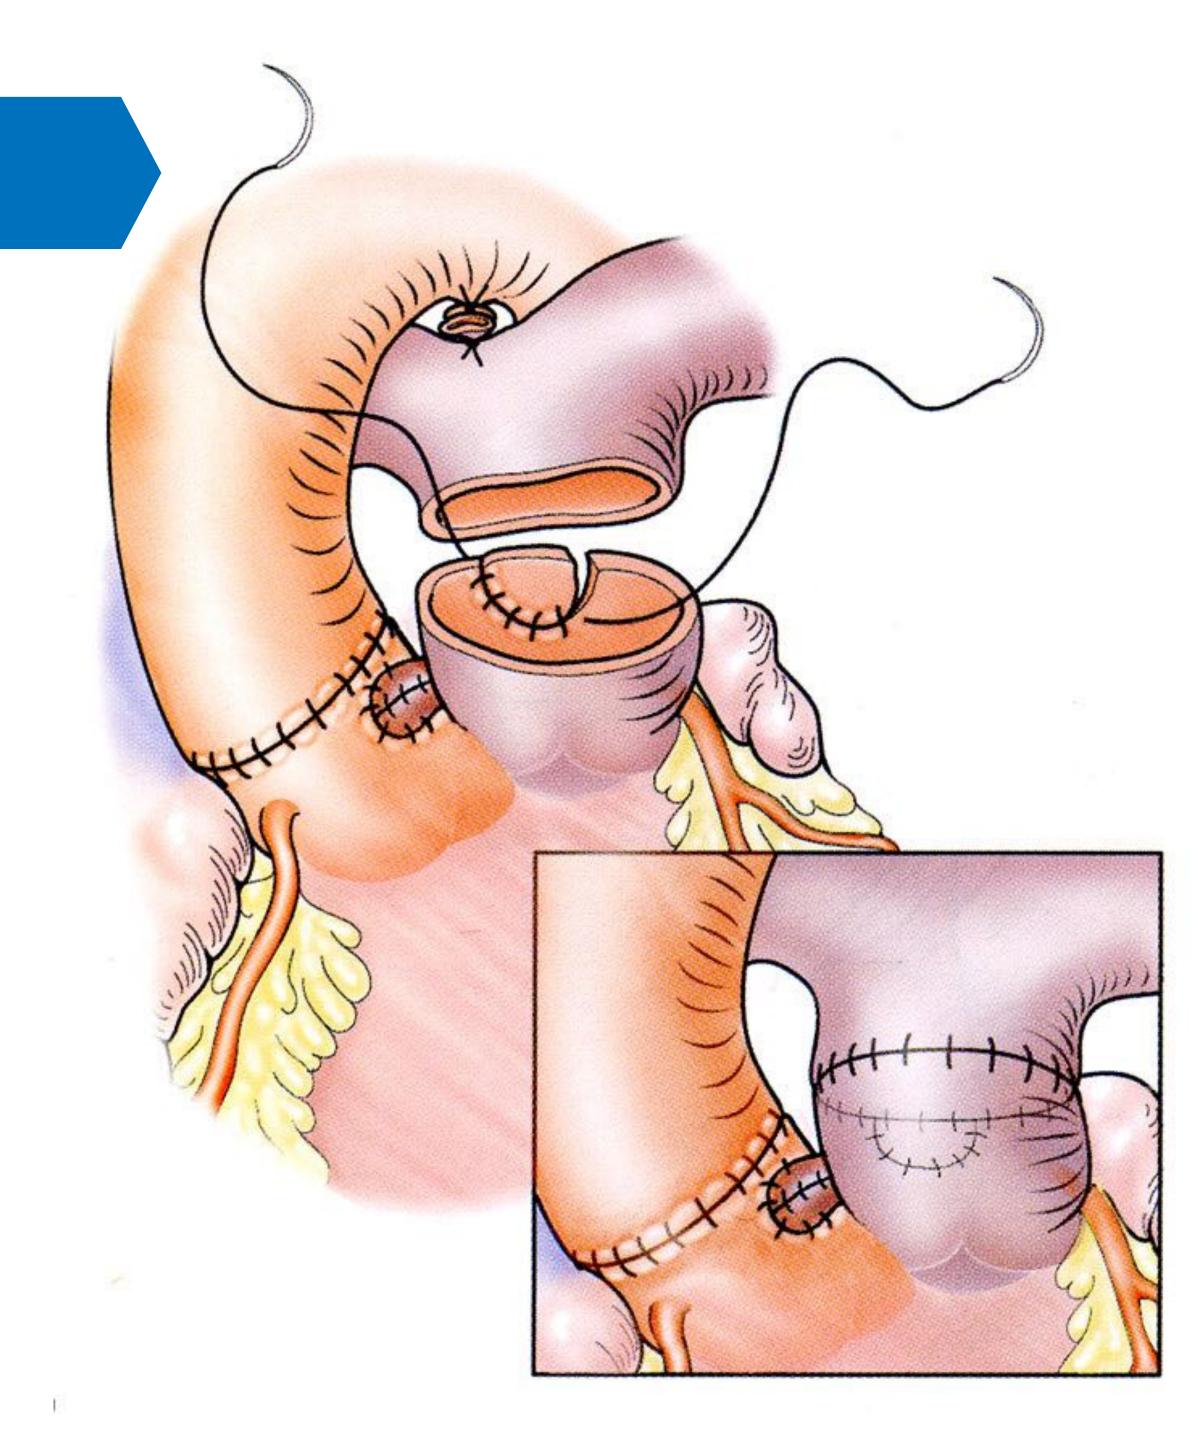

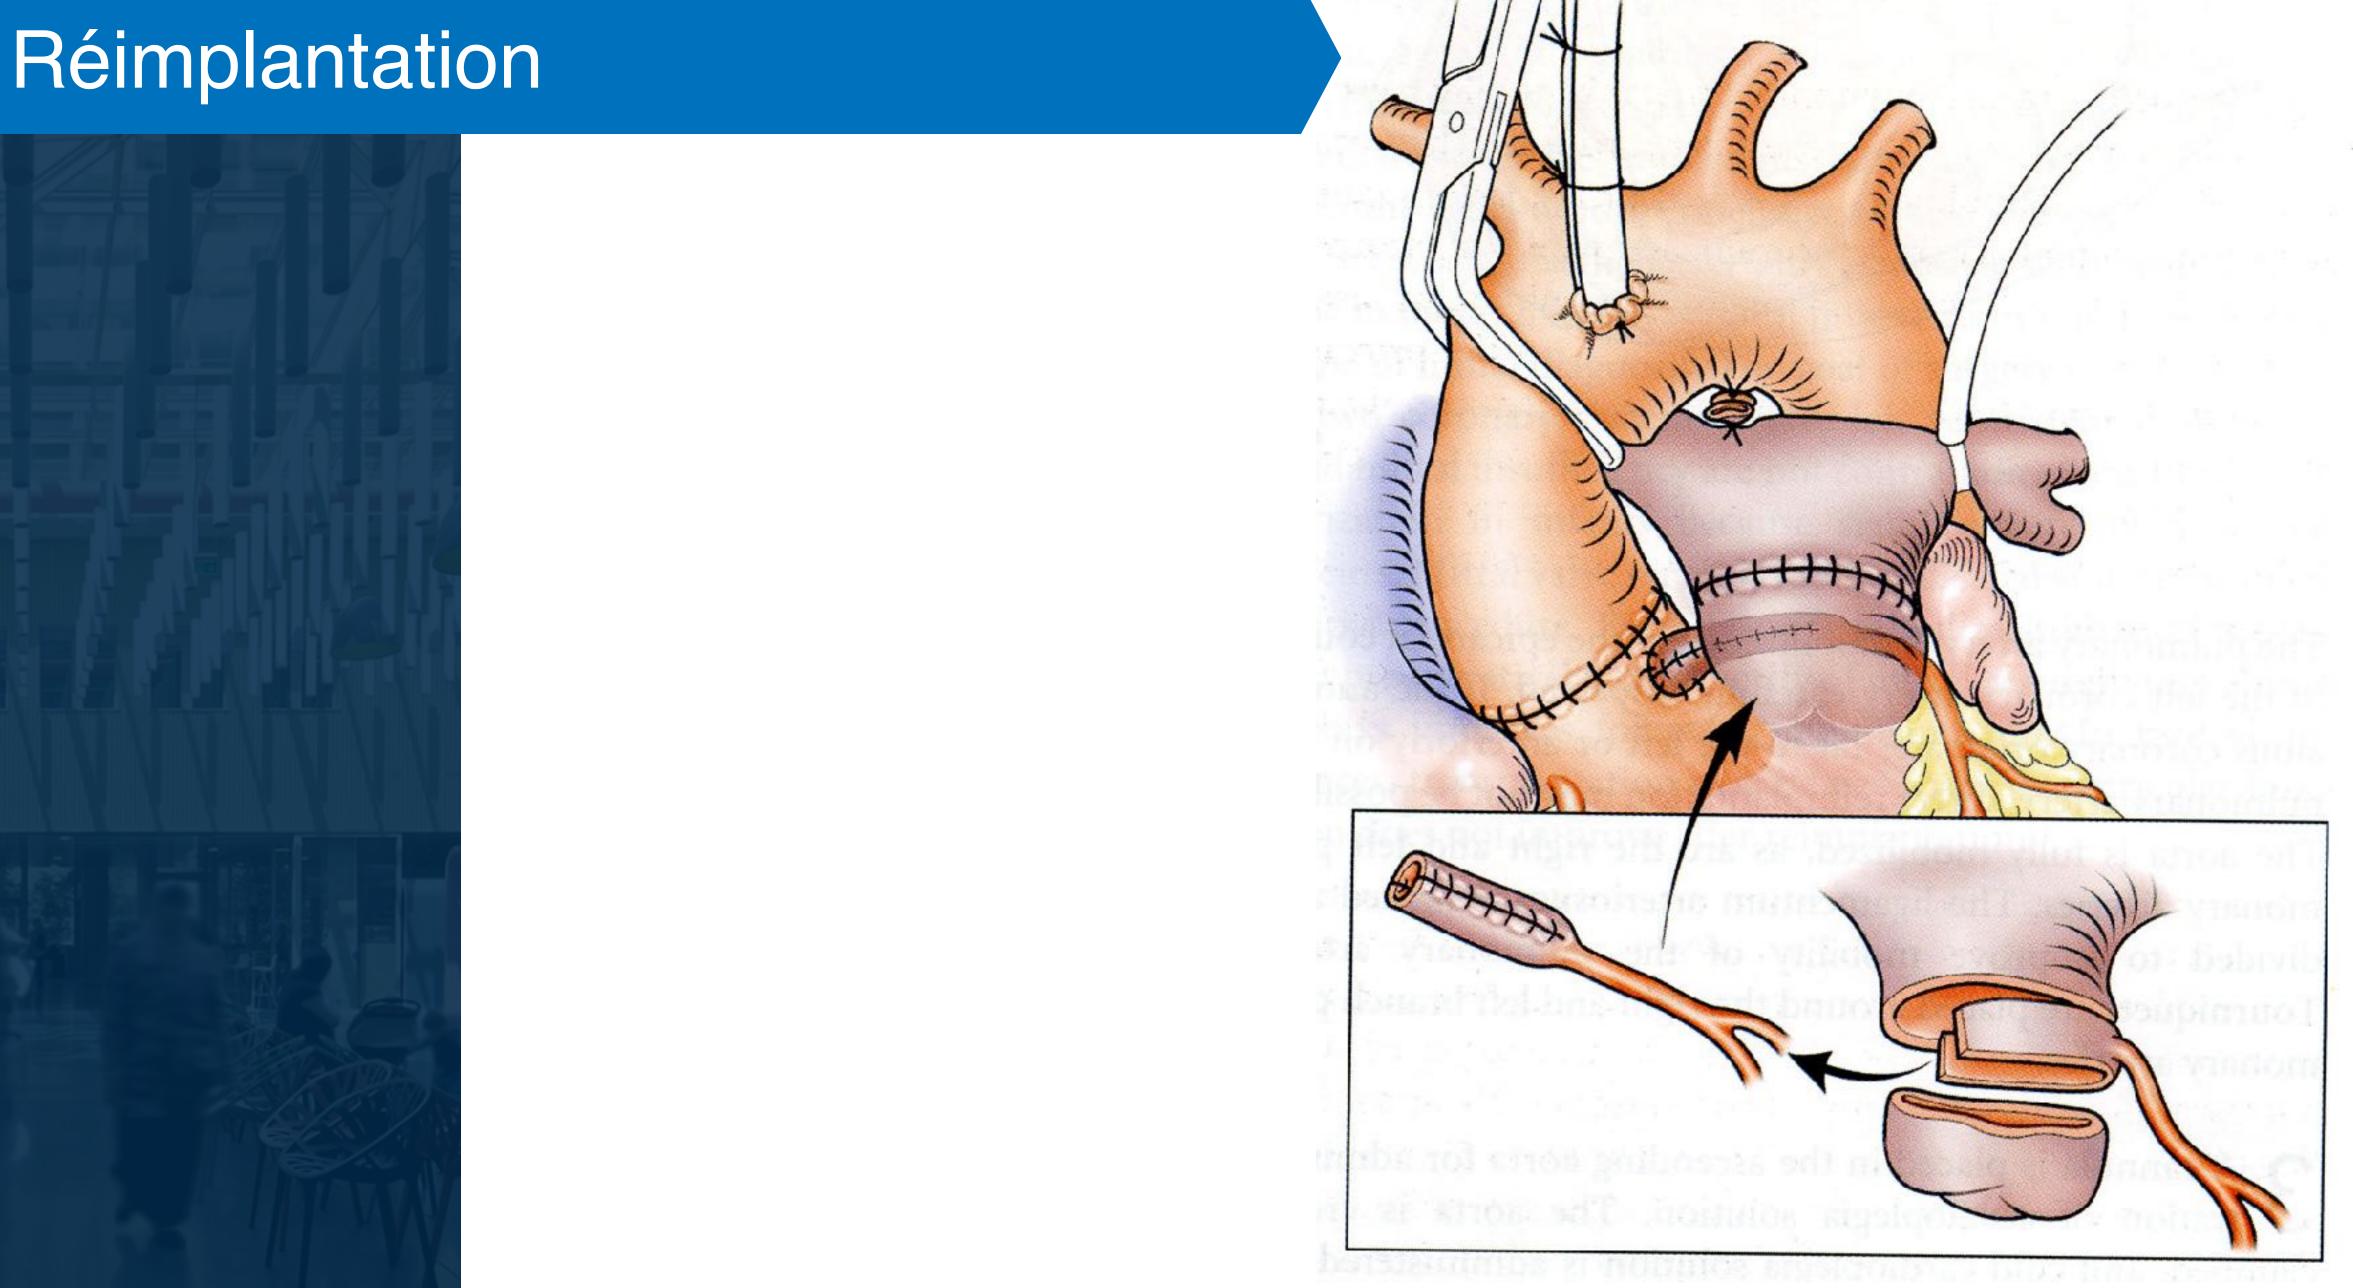

Départ en CEC on laque les AP!!

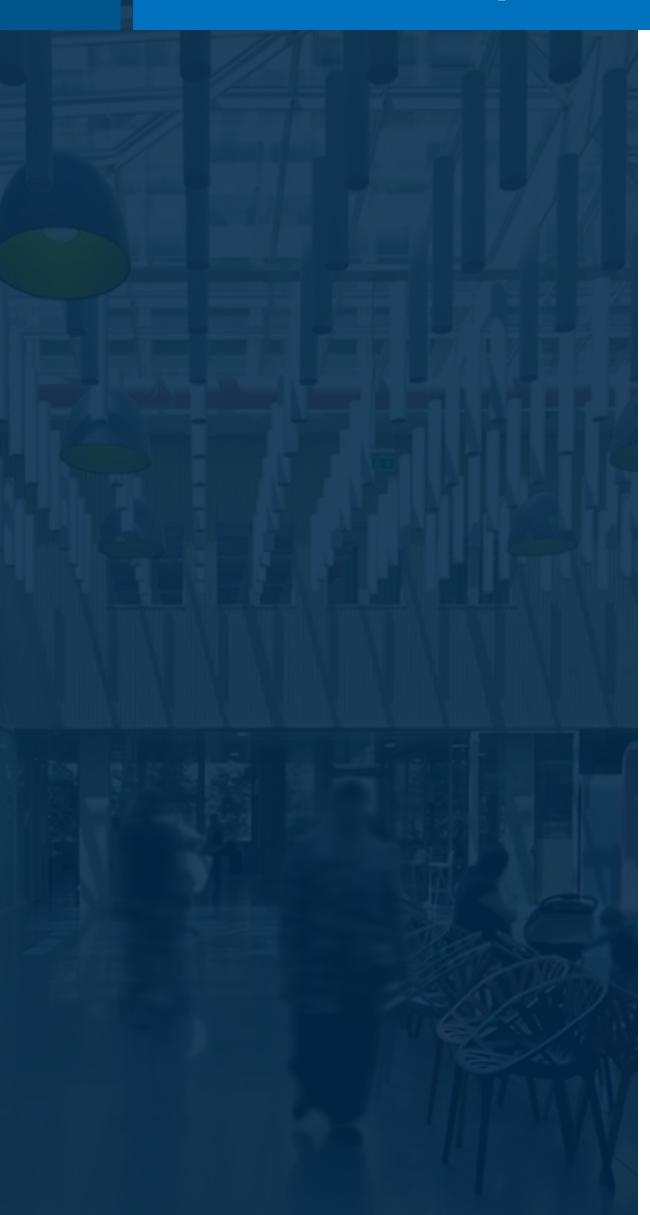

Quand opèrer?

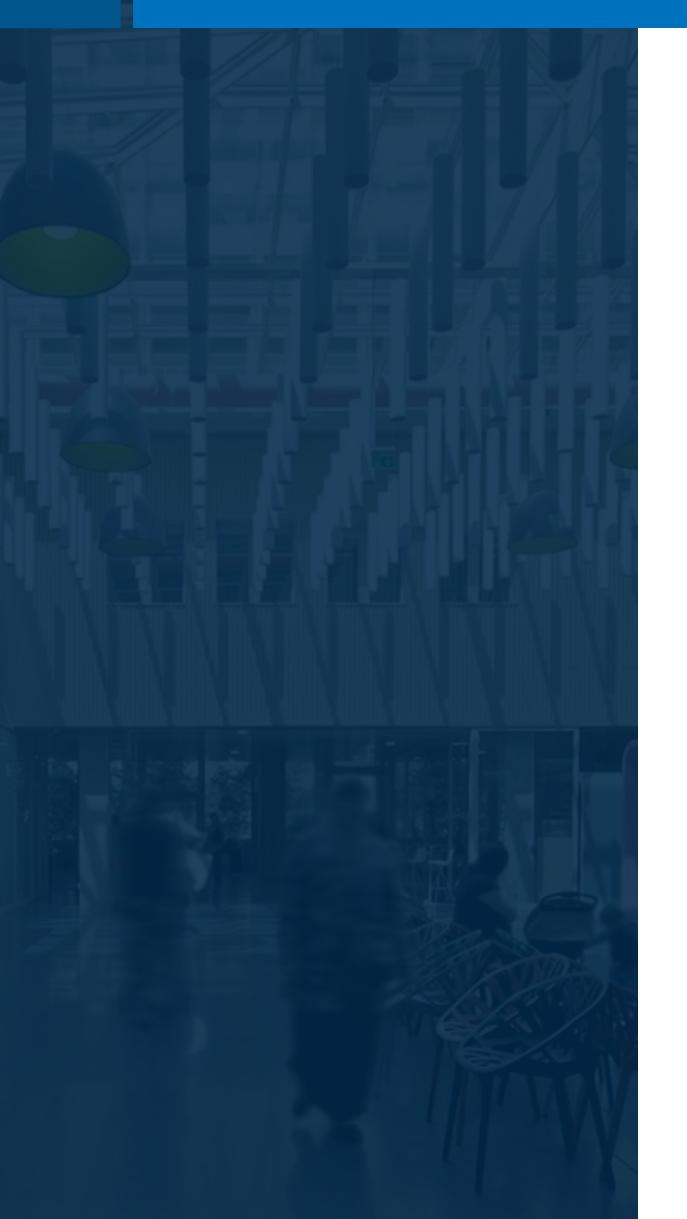

Le plus tôt possible

Dès que le diagnostic est fait

Favorise la récupération ventriculaire

Faut-il réparer la mitrale?

Ne rien faire de première intention

Amélioration constante*

Si IM persistante après récupération ventriculaire fibrose des piliers réintervention secondaire (plastie)

Comment sevrer la CEC ?

CEC d'assistance longue

Sevrage très progressif arrêt possible soutien inotrope raisonnable pression OG acceptable (< 15 mmHg)

arrêt impossible : assistance gauche - gauche par ECMO
