Hôpital
Marie Lannelongue

BCA study 1988 – 1992

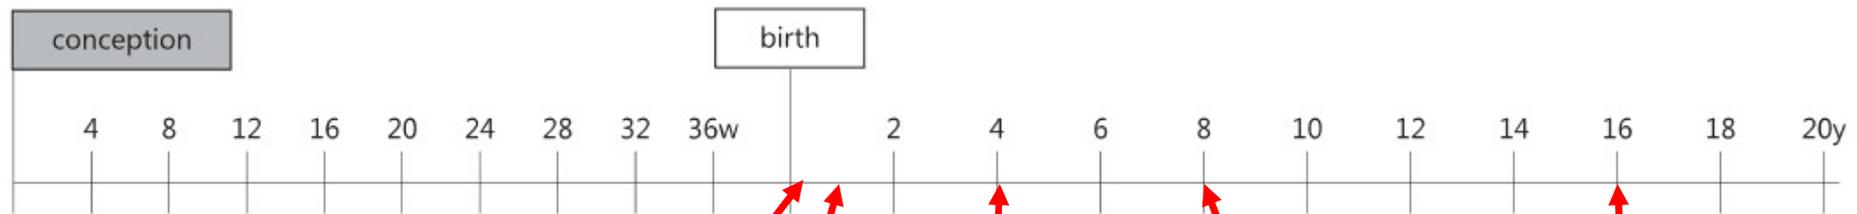

n = 171 ASO

1993 Newburger, NEJM
OR = 11.4 for seizures
if DHCA

1995 Bellinger, NEJM
Lower PDI if DHCA
PDI ~ DHCA duration

1999 Bellinger, Circulation
Worse motor coordination, speech if DHCA

2003 Bellinger, JTCVS
Worse dexterity, speech,
impulsivity if DHCA

BCA study 1988 – 1992

n = 171 ASO

1993 Newburger, NEJM
OR = 11.4 for seizures
if DHCA

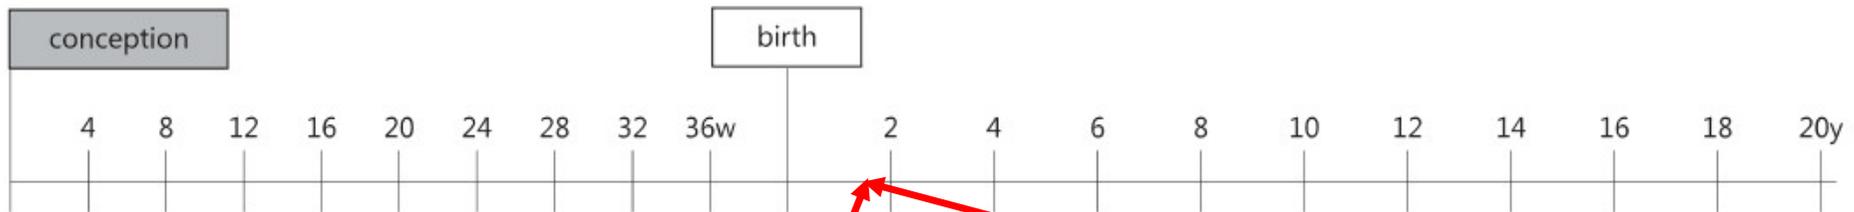

1995 Bellinger, NEJM
Lower PDI if DHCA
PDI ~ DHCA duration

1999 Bellinger, Circulation
Worse motor coordination, speech if DHCA

2003 Bellinger, JTCVS
Worse dexterity, speech,
impulsivity if DHCA

2011, Bellinger, Circulation
33% had MRI abnormalities
65% required remedial
academic or behavioural
treatment

The performance of the full cohort was below expectations in many respects, including academic achievement, fine motor function, visual-spatial skills, working memory, hypothesis generating and testing, sustained attention, and higher-order language skills

ICCON (International Cardiac Collaborative on Neurodevelopment Investigators)
1996 - 2009
n = 1770, ASO = 356

Preop factors explain about **30%** variability in PDI, MDI

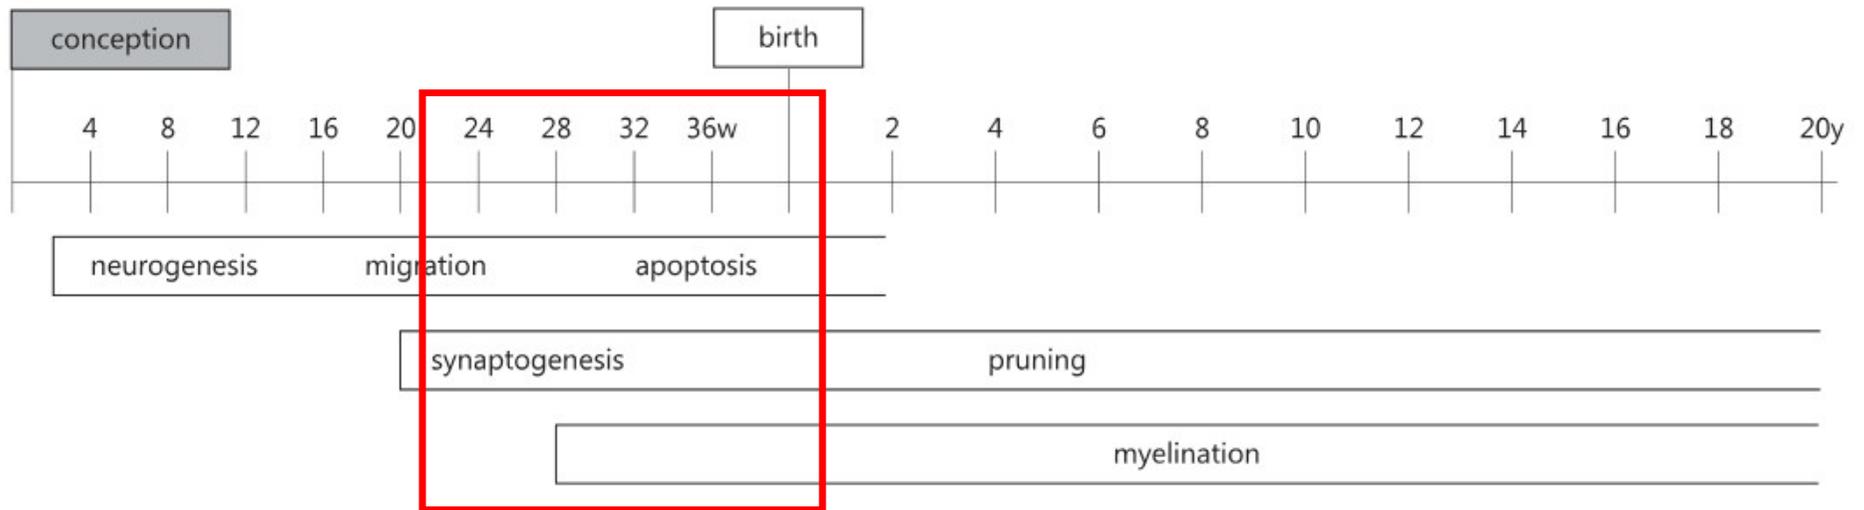

- Genetic
- Extracardiac anomaly
- Birth weight
- Center

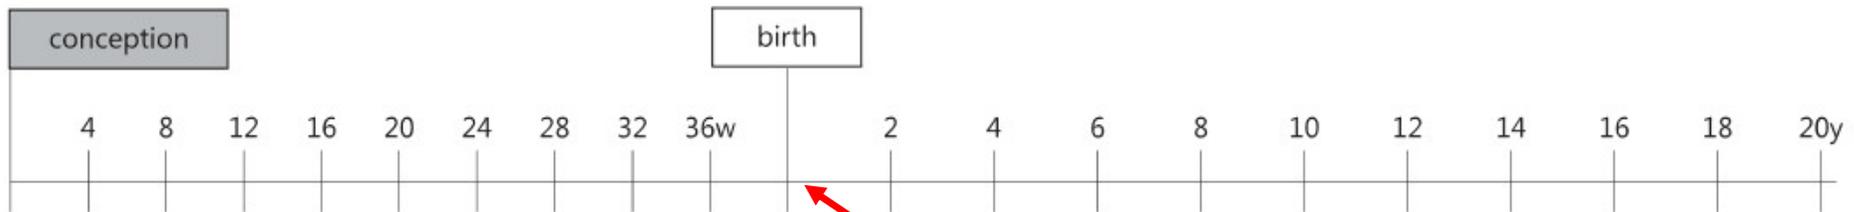

Operative and **postop** factors explain **5%** variability in PDI and MDI

- Total support duration
- ECMO or VAD
- Hospital length of stay > 9 days

PDI : psychomotor developmental index
MDI : mental developmental index

Timing of key neurodevelopmental processes in the human brain

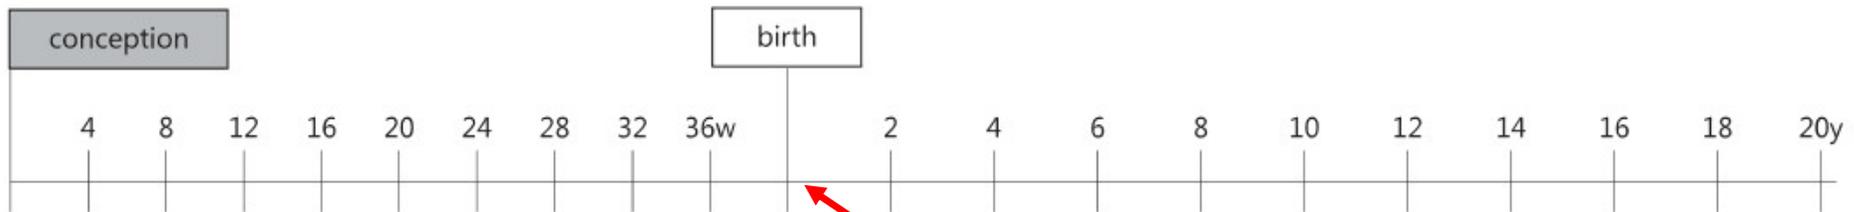

2014 Khalil, Ultrasound Obstet Gynecol
34% MRI abnormalities prior to surgery

2016 Khalil, Ultrasound Obstet Gynecol

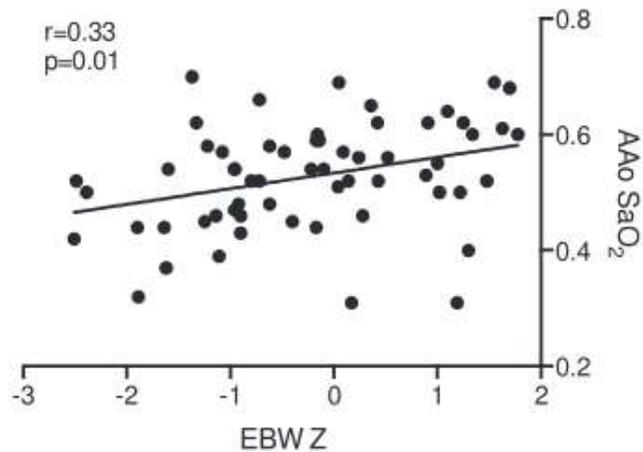

28% MRI abnormalities:

- Structural brain abnormalities
- Reduced brain volume
- Altered brain metabolism
- Decreased MCA pulsatility index

2015 Sun, Circulation

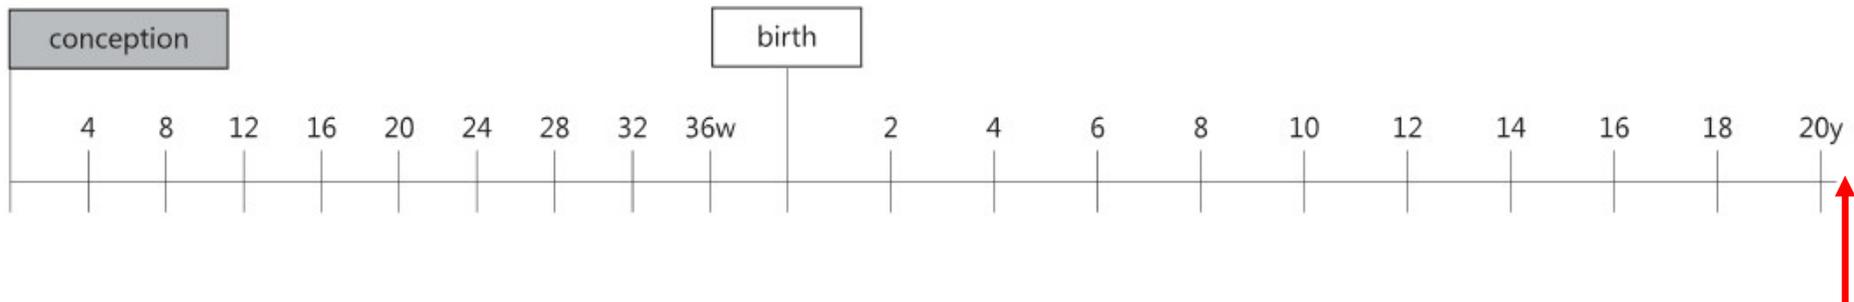

SaO₂ in the ascending aorta correlates with fetal brain size

2014 Khalil, Ultrasound Obstet Gynecol
34% MRI abnormalities prior to surgery

2016 Khalil, Ultrasound Obstet Gynecol
28% MRI abnormalities:

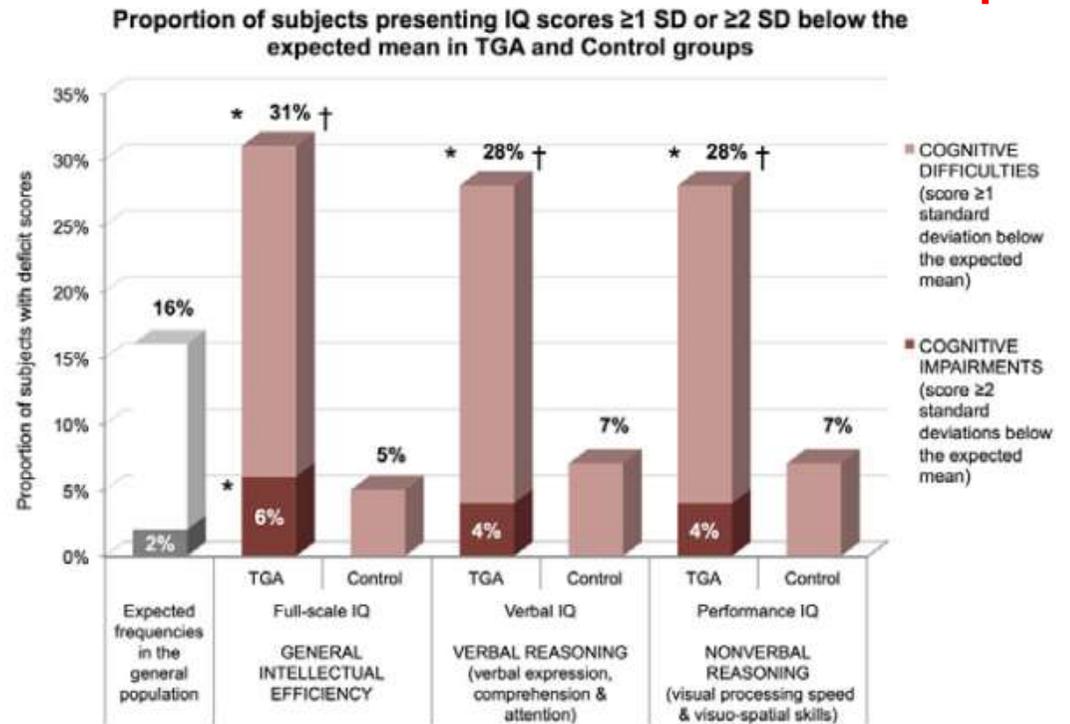

- Structural brain abnormalities
- Reduced brain volume
- Altered brain metabolism
- Decreased MCA pulsatility index

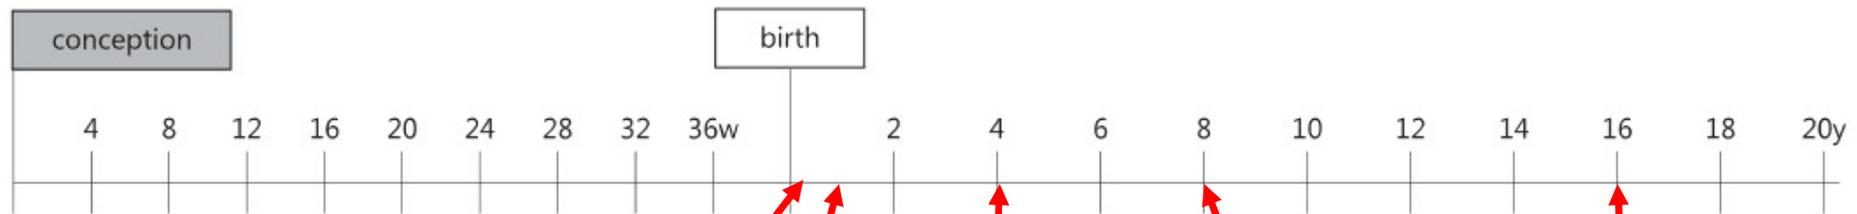

Marie Lannelongue 1984 – 1995 n = 67 ASO, 9.5% with DHCA

Risk factors for low IQ:

- lower parental socioeconomic and educational status
- older age at surgery
- longer hospital stay

BCA study 1988 – 1992

n = 171 ASO

1993 Newburger, NEJM
OR = 11.4 for seizures
if DHCA

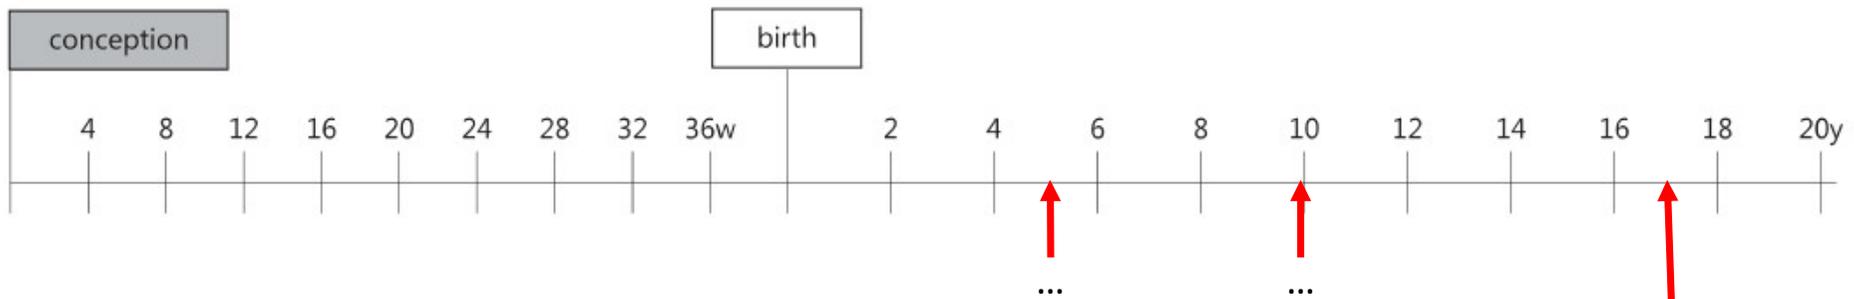

1995 Bellinger, NEJM
Lower PDI if DHCA
PDI ~ DHCA duration

1999 Bellinger, Circulation
Worse motor coordination, speech if DHCA

2003 Bellinger, JTCVS
Worse dexterity, speech,
impulsivity if DHCA

2011, Bellinger, Circulation
33% had MRI abnormalities
65% required remedial
academic or behavioural
treatment

There was a link between VSD and adverse neurological outcome (underwent ASO 11 days later)

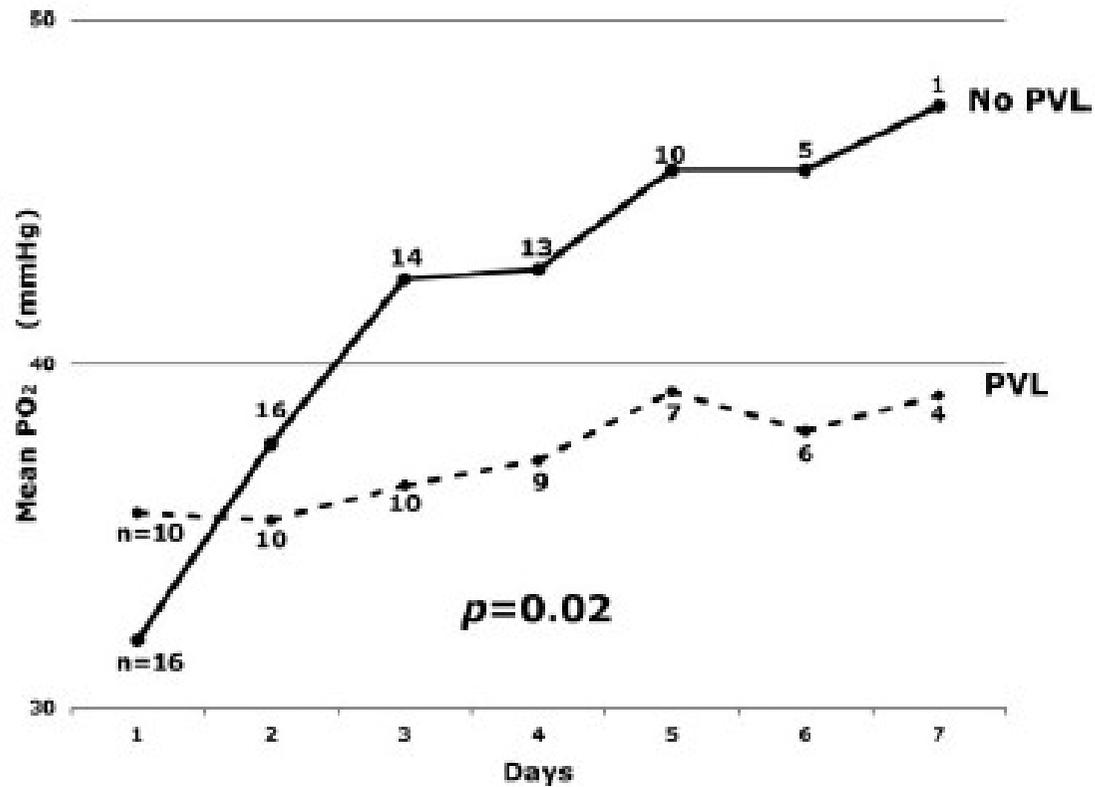

Aachen, 1986 – 1992
n = 96 ASO, low-flow or DHCA

10% neurologic deficit
 14% IQ < 85, 11% IQ < 70
 57.5% white matter injury
 24% reduced brain volume

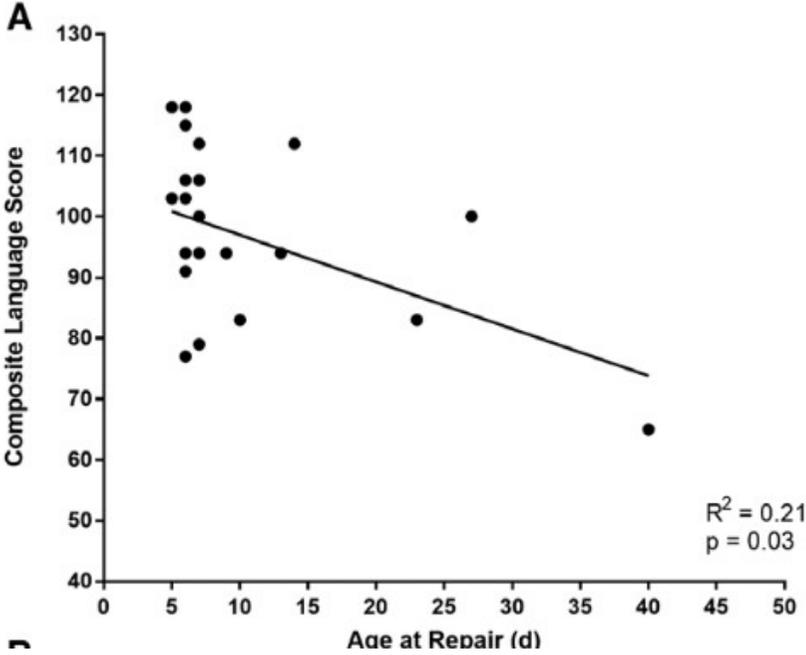

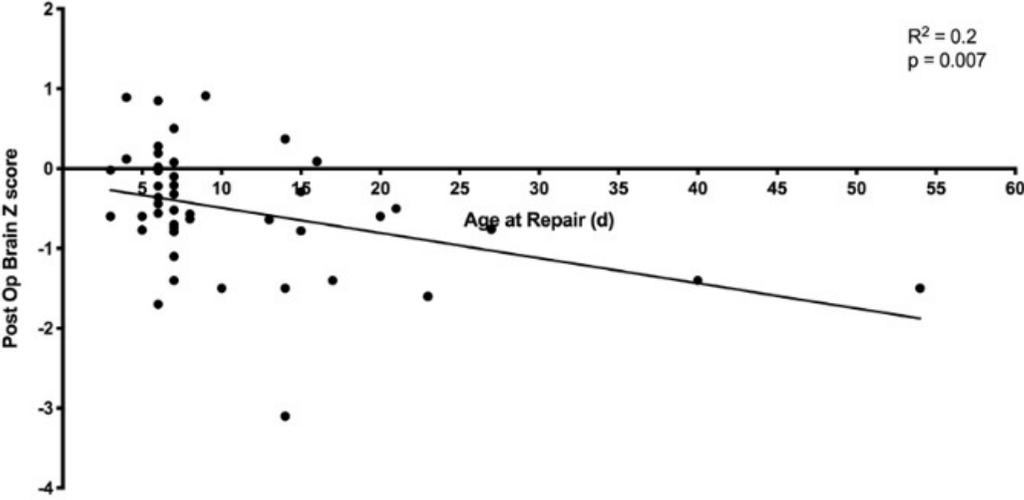

The only risk factor for neurologic dysfunction and MRI abnormalities was perinatal hypoxia and acidosis

Preoperative cyanosis and periventricular leucomalacia

(n = 26)

Neonatal cyanosis and adverse neurodevelopmental outcomes

(n = 45)

Neonatal cyanosis and adverse neurodevelopmental outcomes

Variables	Early (n=32)	Late (n=13)	P Value

Neurotoxicity of anesthesia in early infancy

2009 Wilder, Anesthesiology (n = 5357)

Single anesthesia exposure < 4 years of age did not increase the risk of 5-year learning disabilities

Repeat anesthesia : HR = 1.59

≥ 3 anesthetics : HR = 2.60

2016 Sun, JAMA, the PANDA study (n = 105 sibling pairs)

Single anesthesia exposure < 3 years of age has no impact on IQ scores later in childhood

2019 McCann, Lancet, the GAS study (CRT, n = 722):

Slightly less than 1 hour of general anesthesia exposure < 5 month of age does not alter the 5-year neurodevelopmental outcome when compared with awake spinal anesthesia

Dexmedetomidine as a neuroprotectant in anesthetic neurotoxicity

Conclusions

Neurodevelopmental impairment is a prevalent complication of ASO, and there has been little improvement during the last decades

Genetic abnormalities and preoperative management (duration and amplitude of desaturation) have huge impact on the future neurodevelopment

There are several advantages of providing normothermic CPB during ASO

Further investigations are necessary in order to develop a strategy to limit the neurotoxicity of anesthesia during neonatal cardiac surgery
